

## Pulp & Paper

### Pulp & Paper Case Studies

#### **Case Study #10 pH and ORP sensors as used for process control in bleaching operations at Pulp Mills**

Rugged low-profile parabolic pH glass sensing elements and flat disc style platinum ORP sensing elements resistant to breaking even under extreme abrasive slurries

- Specially Engineered Dissolved Chlorine Gas Resistant Solid State Reference
- Solid-state non-porous reference system minimizes impact of fouling and reduces the frequency of cleaning required

- Application specific engineered thermoplastics and conductive polymer materials of construction lead to optimized sensor lifetime and accuracy
